## Bitstream Font Navigator Windows 10 Free 12

Your work PC probably has about 2000 fonts installed. I really only use 10 or so on... I'm not sure if the bitstream font navigator is available in coreldraw 12. Isn't there some built-in driver or way to make the bitstream font navigator? If not, is there some utility that can create and install it in coreldraw? Maybe there is another version of coreldraw that has a built in font navigation program? Perhaps with a bitstream visualization feature? I can use CursorFonts in coreldraw, but I can't install it because it doesn't support bitstreams.
